

Severity: Medium

Priority: High

Summary: No validation when an invalid email is entered in the "Email" field

Steps to reproduce:

Go to the registration page: <http://example.com/>

Enter in the "Email" field: test@

Fill in the rest of the fields with valid data

Click the "Register" button

Expected result:

An error message appears:

"Enter a valid email address"

The form is not submitted

Actual result:

The form is not submitted, but there is no error message.

The user doesn't understand why they can't register

Attachments: Screenshot

Environment:

OS: Linux Mint

Browser: Mozilla Firefox 140.0.4 (64-bit)

Device: PC

Screen resolution: 1920x1080

Comments:

Maybe regular expression validation is missing or type="email" in input is not configured
